

ROTOFLEX COUPLINGS

SECTION
THROUGH
ROTOFLEX
COUPLING

ELIMINATE SLIDING SPLINES:

they accommodate AXIAL as well as UNIVERSAL movements in independently-sprung driven axles. Thus they eliminate friction and wear and improve suspension.

Illustrations show the joints in the HILLMAN 'IMP'.

'ROTOFLEX' PATENT COUPLINGS drive through pre-loaded rubber, bonded to steel — there are no wearing parts and no lubrication. Their torsional resilience softens impulses and absorbs shock loads.

Available in many sizes, valuable also for propeller shafts, steering columns and for industrial drives where end-float and large changes of angle are involved.
